Qom or Tehran?

Compare the two Ja’fari presets in the Namaz app.

The settings

Qom: Fajr 16.0 degrees, Isha 14.0 degrees, Maghrib 4.0 degrees. Tehran: Fajr 17.7 degrees, Isha 14.0 degrees, Maghrib 4.5 degrees. Both use Asr shadow factor one.

How to choose

Start with the method recommended by your mosque or marja’. If a trusted local timetable uses one of these presets, select that one. If it gives different angles, Namaz also offers custom values.

Before relying on a change

Changing the method can move Fajr and Maghrib. Compare the result with a trusted local source. The city name alone does not determine which method is right for you.
